### DETAILED ACTION

1. Preliminary Amendment filed on 12/31/01 has been received.

#### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 20-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nell et al (U. S. Patent no. 5,611,606) in view of Yoshida (U. S. Patent no. 6,234,589).  
Nell et al discloses: pressure sensors 63,64, servo assistance unit 36,37,38,39, travel sensor 69, trip switch 67, control mode of automatic braking see column 13 line 5 to the end of the document specifically automatic braking can be actuated with a pressure rise and then terminated when pressure drops. Nell et al does not disclose actuating the servo brake based on one threshold and then terminating if the variable does not meet a second threshold within a certain time period. Yoshida teaches actuating the servo brake based on one threshold and then terminating if the variable does not meet a second threshold within a certain time period (see figures 5 and 6 and see column 21 lines 32-56). It would have been obvious to one of ordinary skill in the art at the time the invention was made to terminate automatic braking if a second threshold is not met within a certain time period as taught by Yoshida in the brake system of Nell et al in order to prevent unintended braking of the vehicle which could lead to lose of control.
